

PGxReport™ - Clopidogrel
Drug Sensitivity Assay Results

The table below is a more extensive list of drugs, foods, and other substances that may cause potential harm to the patient, based on genotype, if taken with clopidogrel.

Note: This table lists drug-drug interactions based on pharmacogenomic testing results and should not be considered a comprehensive listing of all potential interactions. This table is based on the results of the CYP2C19 test performed and genes that encode enzymes known to be in the metabolic pathways of cyclophosphamide. Please consult the product insert for cyclophosphamide for more information.

This list does not indicate FDA dosing guidelines but is provided for informational purposes only.
